

Melanoma Clustering Explanation

Interpretation note: this model predicts from tabular attributes linked to image ID, not from raw pixels.

Prediction Summary

Image ID: IMD176
Predicted class: Non-melanoma
Assigned cluster: 0
Cluster mapped label: Non-melanoma
Cluster melanoma rate: 1.1% (1/93)
Distance to centroid: 1.2627
Latent position (PC1, PC2): -0.748, 0.587
PCA variance (PC1, PC2): 51.7%, 16.6%
Ground truth (if available): Non-melanoma

Top feature differences vs assigned cluster prototype

Feature	Image value	Cluster prototype	Status
Dots/Globules (A/AT/T)	AT	T	different
White	NA	X	different
Red	NA	X	different
Blue-Gray	NA	X	different
Black	NA	X	different

Cluster-level predicted melanoma fraction: 0.0%. Cluster-to-label mapping: {0: 0, 1: 1, 2: 0}.

Latent Space Position of Test Case

PCA projection of model input space. Star marker is the test case.
