

Melanoma Clustering Explanation

Interpretation note: this model predicts from tabular attributes linked to image ID, not from raw pixels.

Prediction Summary

Image ID: IMD064
Predicted class: Melanoma
Assigned cluster: 1
Cluster mapped label: Melanoma
Cluster melanoma rate: 92.9% (26/28)
Distance to centroid: 1.3162
Latent position (PC1, PC2): 2.548, -0.032
PCA variance (PC1, PC2): 51.7%, 16.6%
Ground truth (if available): Melanoma

Top feature differences vs assigned cluster prototype

Feature	Image value	Cluster prototype	Status
Dots/Globules (A/AT/T)	A	AT	different
Red	NA	X	different
Dark-Brown	NA	X	different
Black	NA	X	different

Cluster-level predicted melanoma fraction: 100.0%. Cluster-to-label mapping: {0: 0, 1: 1, 2: 0}.

Latent Space Position of Test Case

PCA projection of model input space. Star marker is the test case.
